# Absorb

Bioresorbable Vascular Scaffold System

## It's easy to move forward when you leave nothing behind

The dream of a bioresorbable scaffold has now become a reality. Absorb defines a new paradigm – Vascular Reparative Therapy (VRT). The goal of VRT is to restore the vessel to a more natural state, capable of normal vascular function to enable long term benefits. Leaving nothing behind\* promises a bright future for interventional cardiology. Together, we can lead the revolution in patient care.
